

Contents

I	Foundations	10
1	Entering the ‘Matrix Laboratory’	11
1.1	Introduction	12
1.2	Our “Hello World”: OLS in MATLAB	15
1.3	The beauty of functions	19
1.4	A simple utility function	25
1.5	Review and exercises	32
2	Optimisation I: The Agent Optimises	33
2.1	Profit maximisation and linear programming	34
2.2	Utility maximisation and non-linear optimisation	40
2.3	Simulating heterogeneity	48
2.4	Review and exercises	52
3	Optimisation II: The Economist Optimises	53
3.1	Maximising likelihoods	54
3.2	Generalised Method of Moments	59
3.3	Review and exercises	64
II	Discrete Choice	66
4	Discrete Multinomial Choice	67
4.1	Introduction	68
4.2	The binary logit model	69
4.2.1	The model	69
4.2.2	Simulating the model	70
4.2.3	Estimating the model	72
4.2.4	Estimating by simulation	74
4.3	The multinomial logit model	78
4.3.1	The model	78
4.3.2	Simulating, estimating and estimating by simulation	81
4.4	Multinomial Probit	87
4.4.1	Independence assumptions in the Multinomial Logit	87

4.4.2	Simulating the model	89
4.4.3	Estimating by simulation	90
4.4.4	Estimating by simulation: A logit-smoothed AR simulator	92
4.5	Review and exercises	97
4.A	Deriving the Multinomial Logit log-likelihood	98
5	Discrete Games	100
5.1	Introduction: A simple Cournot game	100
5.1.1	Finding the best-response function	102
5.2	Estimating a discrete Bayesian game	109
5.2.1	A simple discrete game	109
5.2.2	Implementing the best-response functions	113
5.2.3	Solving the game numerically	115
5.2.4	Simulating the game	116
5.2.5	Estimating	119
5.3	Review and exercises	124
III	Dynamics	125
6	Dynamic Choice on a Finite Horizon	126
6.1	Introduction	126
6.2	Dynamic decisions	127
6.2.1	Household consumption	127
6.2.2	A small firm	134
6.3	Introducing the value function	138
6.3.1	Dynamic programming	139
6.3.2	Computational accuracy, curse of dimensionality and memoization	145
6.4	Shocks, uncertainty, and microeconometrics	147
6.5	Review	153
7	Dynamic Choice on an Infinite Horizon	154
7.1	Value functions and infinite solutions	156
7.1.1	A rough outline	156
7.1.2	Computation	158
7.2	Policy iterations and faster solutions	165
7.3	Solving for structural parameters using GMM	169
7.3.1	Applying GMM to our dynamic model	171
7.3.2	Final thoughts on estimation	175
7.4	Review	176
7.A	Analytically iterating the value function	176

IV	Non-Parametric Methods	181
8	Kernel Regression	182
8.1	Parametric v. nonparametric approaches	183
8.2	Univariate kernel regression	187
8.3	Structures and cell arrays	191
8.3.1	Cell arrays	192
8.3.2	Structure arrays	194
8.4	Impact of kernel and bandwidth choice	197
8.5	Cross validation	204
8.6	Review and exercises	210
9	Semiparametric Methods	211
9.1	Multivariate kernels	212
9.2	The curse of dimensionality	215
9.3	Approaches to dimension reduction	216
9.4	Partially linear model	217
9.4.1	Robinson’s approach	218
9.4.2	Implementation	219
9.5	Single index model	221
9.5.1	Ichimura’s estimator	223
9.5.2	Implementation	224
9.6	Review and exercises	229
V	Speed	230
10	Speeding Things Up . . .	231
10.1	Introduction	231
10.2	Clever coding	232
10.2.1	Vectorising	232
10.2.2	Sparse matrices	234
10.2.3	Profiling code	237
10.2.4	Waiting	239
10.3	Parallel computing	241
10.4	Parallel computing plus: the GPU	245
10.5	Other tricks	249
11	. . . and Slowing Things Down	251
